MEMORANDUM FOR DOD PREPARING ACTIVITIES

SUBJECT: Overage Document Report

This report provides a statistical age profile of the standardization documents prepared by each DoD preparing activity. Under the Defense Standardization Program overage document review program, preparing activities must review their documents at least every 5 years and take action to update, validate, cancel, or inactivate for new design.

A preparing activity should not have more than 20 percent of its documents categorized as overage. If your activity has an unusually high number of overage documents, please take corrective action. While we appreciate that resources are declining for most activities, this report can serve as a management tool that might provide additional justification to increase or maintain resources.

We wish to thank the Air Force Materiel Command for creating this report from data provided by the Defense Printing Service.

Andrew D. Certo
Chief,
Standardization Program Division

Foreword

This report has been prepared on behalf of the Office of the Assistant Secretary of Defense for Economic Security, (OASD(ES)IA/SPD) by the Air Force Materiel Command (AFMC) Defense Standards Improvement Office. The objective of the report is to inform the DoD standardization community of both the quantity and the age of their documents. The report is not intended to be recriminatory, but is intended to inform and motivate the standardization community. This publication represents the first issue since the publication of the Secretary of Defense's 29 June 94 policy memo "Specifications & Standards -- A New Way of Doing Business" and is provided both as a benchmark in our standardization process and as a foundation for the preparing activities and standards improvement leadership.

This is the third edition of this report. Due to personnel reassignments, standardization automation plans, and the highly dynamic nature of the DoD Standardization Program, there are no plans to reissue this type of document.

The author would like to thank several personnel for providing the support necessary for the publication of this document:

Mr. Steve Lowell, OASD(ES)IA/SPD, continued support in this initiative.

Mr. Richard Rodemer, Defense Printing Service, provided technical information.

Any questions on the preparation of this document can be directed to the author.

Background

Over the last few years, the US market place has adopted and developed a system of Total Quality Management. One of the premises of this system is that management must have a metric to determine compliance with corporate goals and policies. DoD 4120.3-M, "Defense Standardization Program Policies and Procedures," requires that "all documents listed in the active DoDISS (Department of Defense Index of Specifications and Standards) must be reviewed within five years from the time they were last updated or validated." This is a critical policy. It facilitates review of documents to ensure that they are still technically valid so that the DoD can procure items in a cost effective manner while enhancing competition. This report provides a metric for document age and is provided as a management tool for all levels of the DoD standardization community.

Another premise for Total Quality Management is that personnel understand their responsibilities and are provided the authority required to actualize those responsibilities. A preliminary review of the data contained herein indicates that all preparing activities may not be completely aware of the documents assigned to their standardization management activity. This document can also serve as a baseline for documenting organizational responsibilities.

The data used in the generation of this report came from the Acquisition Streamlining and Standardization Information SysTem (ASSIST) database. This is the same database used to generate the DoDISS. If a Standardization Management Activity (SMA) disagrees with the data provided in this report, the DoDISS should be checked to determine if the data is correct. If the DoDISS is incorrect, it is the SMA's responsibility to submit a form DD-1865 to the Defense Printing Service so the ASSIST database can be corrected.

The author of the report agrees to provide the specific data used to generate the graphics in this report to any SMA. If an SMA requests the information, the SMA should mail, E-mail or fax the author. Data can be sorted on date, FSC, document number or other DoDISS parameters. If copies on electronic media are desired, a formatted DOS disk should be mailed to the author. The data are available in Microsoft Excel. If the SMA does not desire the information in Excel Version 4.0, the SMA should state the desired format. The SMA should also state the type of sort desired for the spreadsheet. Data can also be obtained through the ASSIST over a modem.

As mentioned in the Foreword, this is the third edition of this report. During the generation of the first edition of this report several inconsistencies were noted and reported to the Defense Printing Service (DPS). The second edition noted reduced errors but still some significant issues. The data generated for this report was almost perfect. Of over 50,000 documents reviewed in this report, only 12 needed correction to the ASSIST and these were accomplished immediately. DPS has excelled in providing a quality database to the defense industry and, in the opinion of the author, should be commended.

Data Analysis

For the simplification of the graphics in this report, the years analyzed were limited to 1950 to 1995. This simplification caused dates to be adjusted in two ways. First, the data for this report were generated on May 9, 1995. For simplification of analysis, the 1995 documents were added to 1994 so that documents were not considered overage until they were dated before 1990. Secondly, some documents were dated earlier than 1950. These documents were included in the data for 1950. This simplification caused some misleading increases in the bar representing the number of 1950 documents.

As mentioned above, DoD 4120.3-M requires that documents be reviewed every five years. When documents are reviewed, and changes are deemed necessary, more complicated documents can require almost two years to develop, coordinate and publish a document revision. For this reason, the graphics list both the percent of documents over five years old and the percent of documents over seven years old. All documents over five years old would be in some phase of a review cycle. An aggressive goal is to have no documents over seven years old.

This year's report includes an analysis of the age of interim documents. The DoD 4120.3-M defines an interim document as "revisions, amendments, or change notices issued by a single Military Department, a Defense Agency, or an activity in the DoD Component for coordinated Federal or military specifications or standards; guide specifications; or military handbooks or bulletins to meet a need when time does not permit preparation of a coordinated document." DoD 4120.3-M, para 5.D.3.e states that "the interim document must be superseded by a coordinated document within two years of the interim document's approval date or it shall be canceled by the OASD(P&L) SPD. 'Used-in-lieu-of' documents are now referred to as 'interim documents.'"

Interim documents were determined by reviewing all document numbers. All "00" documents were extracted from the ASSIST. MIL-STD-961, para 5.2.3.3, and MIL-STD-962, para 5.3.2.3, state that "Used-in-lieu-of" documents shall be assigned numbers beginning with "00". The summation of these two sets of documents represents the interim document database for the DoDISS.

DoD Interim Document Summary

Summary

DoD Document Summary

Comparison of Document Age

As part of the acquisition reform of military specifications and standards, questionnaires are to be filled out for all military specifications, standards, and spec sheets. As a result of this requirement, all military documents will either be validated or revised to comply with acquisition reform initiatives. Current document revision is estimated to be completed by the end of calendar year 1997. As a result, if there is an overage document at the end of calendar year 1997, the document will have neither been revised or reviewed and has probably "fallen through the cracks" of the standardization program. The author recommends that any such documents be canceled automatically.

Appendix A - Spreadsheet for Graphics

This appendix provides the data that were used to generate the graphs of this report. They are provided so that standardization personnel can obtain a clearer understanding of the document age distributions depicted in the report. As mentioned above, any documents dated earlier than 1950 were listed under 1950.

If any preparing activity desires more specific data, they should contact the author.
